

inplace

MINING

- Margin over volume
- +60% of material remains underground
- Smaller underground openings
- No or small tailings storage
- Reduced waste disposal
- Smaller surface infrastructure
- Low surface footprint
- Reduced energy

inline RECOVERY

- Reduced material movement
- Underground extraction
- Selective (precision) mining
- Pre-concentration at the face
- Ore sorting technologies
- Underground modular plant

inmine RECOVERY

- Low to no material movement
- Underground extraction
- Fracturing ore in place underground
- Leaching technologies to extract ore

insitu RECOVERY

- No material movement
- Surface extraction
- Drilling technologies
- Leaching agents deployed

REDUCED ROCK MOVEMENT AND FOOTPRINT
